PERSONALITY ACROSS DEVELOPMENT LAB

Recruiting High School Students to Intern in the Personality Across Development Lab!

The PADlab is looking for bright and responsible students to intern in the lab for the summer of 2016. The PADlab focuses on child personality and child development.

The student would recruit participants for child personality studies, while learning research methods, experimental design, and basic data analysis. The student would be working closely with one of the lab's graduate students and would meet weekly with the Principle Investigator, Dr. Tackett.

The internship would last 8 weeks, with the student working 15 hours per week. The weeks do not have to be consecutive!

This internship would be an especially good fit for students interested in careers in psychology, epidemiology, human biology, human genetics, neuroendocrinology, medicine, or mathematics. The lab website contains more information about our ongoing projects and recent publications:
